MPS system included in large commercial building specifications,  
Hong Kong, CBD

The Company is very pleased to advise that Hydrotech's MPS system has been included in a tender addendum as part of the waterproofing system for a new prestigious large commercial building in the Hong Kong CBD. The building design incorporates commercial shopping outlets in the basement and the building owner is concerned about loss of income as a result of water ingress and humidity issues. The project is presently out to tender with construction due to commence in September 2009.

The project provides Hydrotech with an opportunity to enter into the mainstream commercial construction sector in Hong Kong by providing the client with added protection against the long term effects of water ingress and associated humidity issues in commercial business units. The contract value is \$495,000HK (approximately \$80K AUD)

We look forward to providing the market with updates on this project as it progresses.
